WHAT I LEARNED

Practical Learning with AI Tools

I gained practical experience using AI-powered tools to create a website, build a chatbot, and prepare information for chatbot use.

1. Website Creation Using Lovable

I learned to create a website by giving prompts to **Lovable**. I practiced explaining the website's purpose, layout, and features clearly, then reviewing and refining the generated result.

2. Chatbot Creation Using Chatbase

I learned to create a chatbot with **Chatbase** by uploading a document as its knowledge source. This helped me understand how a chatbot can use provided information to answer users' questions.

3. Preparing Documents for Chatbot Data

I learned to organize chatbot information into a clear document using relevant facts, headings, and simple explanations. I also understood the importance of checking the content for accuracy, clarity, and unnecessary repetition before uploading it.

Skills Gained

- Writing clear prompts for AI tools.
- Building basic websites and chatbots using AI platforms.
- Structuring information for a chatbot's knowledge source.
- Testing AI-generated results and checking their accuracy.

Conclusion

These activities introduced me to AI-assisted website development, document-based chatbot creation, and knowledge preparation. I learned that clear prompts, well-organized data, and careful testing are important for creating useful AI-powered applications.
